

Supersight eye surgery

Price: ฿200.000.-

SuperSight Surgery is the procedure which utilizes modern cataract surgery techniques and offers visual solution for farsighted patients who are not candidates for LASIK. The package is 200,000 baht, including doctors & anesthetic fees, operating room, inpatient medications, 1 night accommodation, nursing, room service charge and meals. The baseline eye evaluation is 3,000 baht. The operation time can be scheduled on the same day or the next following day. Post- operation Follow up time is one day, one week, one month, six month and one year.

Unlike procedures that focus on changing the shape of the cornea, Super Sight Surgery replaces the lens inside the eye, with one that can be focused by the patient using physiological processes.

Normally, the patient who is a candidate who will have general benefits from Super Sight Surgery includes :

1. **Cataract vision:** Will be corrected such as glare or poor night vision cause difficulty driving at night, cloudy and poor color perception, deterioration of eyesight which cannot be corrected with (external) corrective lenses as patient notice that he could not see as good as he once did.
2. **Refractive error:** Could correct all farsightedness and nearsightedness and some degree of astigmatism, so most patient will have normal distance vision after Super Sight Surgery.
3. **Reading Problem:** With accommodative lenses implantation, most patients can control his focusing power at all distance by himself and decrease and even eliminate use of reading glasses.
4. **To Those who are 45 years old or older:** This latest technology , consists of painless & bloodless safe procedure that will offer effective and permanent normal vision, like you can turning back the clock, visually. And it lasts your life out.
